- Pinpoint areas that need change, monitoring or upgrade.

Preston Lane Consulting

Preston Lane Consulting (PLC) is a customer focused consulting agency, providing technical Manufacturing Execution System consulting and training services to manufacturing companies in high-tech industries.

Our goal at PLC is to provide High Quality, Professional and Reliable MES Consulting and Training services, utilizing the skills, experience and knowledge gained through many years of PROMIS consulting.

PROMIS is the heart of a manufacturing system. It controls the manufacturing line and needs to run smoothly and effectively. PROMIS runs without the need for much intervention, but occasionally it can use a checkup.

PLC has joined forces with **Lloyd Pritchard Consulting** to provide the "PROMIS System Assessment" Consulting Service to PROMIS Customers World-Wide.

Service Details

The PROMIS Upgrade Assessment is a 3 day on site assessment of customers test and production environments including the current PROMIS implementation, layered products and supporting hardware infrastructure, including but not limited to:

- PROMIS system (application and hardware) review.
- Operating system performance.
- PROMIS database throughput.
- Database file tuning recommendations.
- Middleware throughput.
- PROMIS/ODS performance.
- PROMIS/TP performance.

On completion of the on-site Assessment, a report will be provided to the customer outlining the findings of the investigations including recommendations. This will provide a customer with suggestions for performance improvement and any recommendations that will keep your PROMIS system running effectively in the future.
