

FEATURES

- **3 Day On-Site PROMIS System Review**
 - **Hardware**
 - **Software**
 - **Database**
 - **Interfaces**
 - **Customization**
- **Detailed Assessment Report**

BENEFITS

- **Educated Project Planning**
- **Educated Resource Planning**
- **Qualified Budget Approval**
- **Low Risk Upgrade**
- **Minimal Downtime to Upgrade**
- **Reduced Customizations**
- **Upgrade to 5.8.x in one step from any release from 5.5 onwards.**
- **New PROMIS Functionality**
- **PROMIS Experts Availability**

Preston Lane Consulting

Preston Lane Consulting (PLC) is a customer focused consulting agency, providing technical Manufacturing Execution System consulting and training services to manufacturing companies in high-tech industries.

Our goal at PLC is to provide High Quality, Professional and Reliable MES Consulting and Training services, utilizing the skills, experience and knowledge gained through many years of PROMIS consulting.

The main reasons why manufacturers upgrade their PROMIS systems are software version and hardware obsolescence as well as the great benefits gained from new functionality in newer versions. But with the integration of PROMIS with many other factory systems, the upgrading process has become more and more complex. Upgrading hardware, operating systems, database software and client applications, along with the traditional PROMIS application and database upgrade require significant planning and a detailed understand of the tasks involved. Resource planning, budget approval and scheduling activities to fit with manufacturing requirements require significant amounts of data in order to make qualified decisions.

PLC has joined forces with **Lloyd Pritchard Consulting** to provide the "PROMIS Upgrade Assessment" Consulting Service to PROMIS Customers World-Wide to make your upgrade process run more smoothly.

Service Details

The PROMIS Upgrade Assessment is a 3 day on site assessment of customers test and production environments including the current PROMIS implementation, layered products and supporting hardware infrastructure, including but not limited to:

- Current and future hardware requirements and options for upgrade.
- Current software use and upgrade requirements.
- Current installation issues.
- A review of PROMIS customizations and interfaces and options for upgrade.
- An evaluation of the resources required to upgrade the production database.
- A review of PROMIS clients.
- Discussion on testing, validation and training required during the upgrade.
- Training requirements
- New PROMIS functionality

On completion of the on-site Assessment, a report will be provided to the customer outlining the findings of the investigations including recommendations. This will provide a customer specific high level upgrade project plan, along with the resources required for moving to the most recent version of PROMIS.
