

PROMIS / VMS System Management Training

This 2 day lecture course concentrates on PROMIS architecture and the relationship between PROMIS and VMS. It covers basic management functions like system startup and shutdown , submitting and monitoring builds and adding PROMIS user accounts. It also covers more advanced topics, like database backups, dual machine architecture and system monitoring.

You will learn about the PROMIS environment, the structure of the PROMIS database, how to customize PROMIS for your site and gain an overview of the GUI applications that partner with PROMIS.

Prerequisites

- Basic Understanding of PROMIS
- Working Knowledge of VMS

What You Will Achieve

- The basic skills you need to manage your PROMIS system effectively
- An architectural background that will make PROMIS programmers and integrators productive

Who Should Attend

- PROMIS System Managers
- VMS System Managers
- PROMIS Programmers and Integrators
- Key Users
- Others interested in how PROMIS operates.

Topics

- PROMIS Architecture
- The PROMIS Database
- The PROMIS Build
- PROMIS Partner Programs
- PROMIS Control Menu
- System Management
- Database Management
- PROMIS Management
- Site Tuning and Customization
- PROMIS Account Management
